PROJECT EXPERIENCE

Keyword — Password generator / manager
Keyword is an app that promotes the use of unique secure passwords across a users various accounts. Users would use this platform to link and save passwords to various accounts across any platforms for storage. This assists users with creating new and unique passwords for each account they register instead of reusing existing ones or repeating patterns. The primary feature involves a process that takes in user information, that they decide to share. This info could be personal or random and can be strings of digits, characters, special characters, combinations of either to produce unique passwords based on the the users "modifiers" to generate random combinations
